6 DO NOT USE A CALCULATOR IN THIS QUESTION.

A curve has equation $y = \left(3 + \sqrt{5}\right)x^2 - 8\sqrt{5}x + 60$.

(a) Find the x-coordinate of the stationary point on the curve, giving your answer in the form $a + b\sqrt{5}$, where a and b are integers. [4]

(b) Hence find the y-coordinate of this stationary point, giving your answer in the form $c\sqrt{5}$, where c is an integer. [3]
