4 Variables x and y are such that when e^{4y} is plotted against x, a straight line of gradient $\frac{2}{5}$, passing through (10, 2), is obtained.

(a) Find y in terms of x. [3]

(b) Find the value of y when $x = 45$, giving your answer in the form $\ln p$. [2]

(c) Find the values of x for which y can be defined. [1]
