5 Variables x and y are such that $y = \dfrac{\ln(2x^2 - 3)}{3x}$.

(a) Find $\dfrac{\mathrm{d}y}{\mathrm{d}x}$. [3]

(b) Hence find the approximate change in y when x increases from 2 to $2 + h$, where h is small. [2]

(c) At the instant when $x = 2$, y is increasing at the rate of 4 units per second. Find the corresponding rate of increase in x. [2]
