8	4×145 (= 580) or 5×142 (= 710) or $\frac{145+145+145+145+x}{5} = 142$ oe		3	M1	for one correct product or for a correct equation for the weight of the last banana
	$5 \times 142 - 4 \times 145$ or "710" – "580" or $145+145+145+145+x = 5 \times 142$			M1	A fully correct method to find the weight of the 5th banana or a fully correct equation to find the missing weight with no denominator
	Correct answer scores full marks (unless from obvious incorrect working)	130		A1
